

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of claims :

1. to 13. (Canceled)

14. (Previously amended) A paper dispenser comprising :

a paper dispenser body made of a folded single sheet of pliable material and having a substantially frustopyramidal exterior shape with an opened top and a closed bottom with, characterized in that it comprises four exterior walls defining the frustopyramidal shape and four interior walls delimiting a rectangular prism-shaped cubical paper-receiving compartment, a slot extending downwardly from the top of both one of the exterior walls and a corresponding one of the interior walls to provide digital access to paper in the cubical paper-receiving compartment wherein, said exterior walls are being spaced apart from corresponding ones of said interior walls, in order to create with a space between them, and further characterized in that at least one of said exterior walls comprises an opening and a corresponding at least one of the interior walls has an exterior face having an illustration or marking which is visible through the opening and across the space;

said single sheet of pliable material, prior to folding, ~~having~~ having a substantially cross-shaped center portion and four side portions, ~~wherein~~ said cross-shaped center portion ~~comprises~~ has a middle section that, once folded, becomes the bottom of said paper dispenser, and four adjacent sections, adjacent the middle section, which once folded become the exterior walls, wherein the four side portions are connected to corresponding ones of the four adjacent sections, opposite the middle section, and each comprise a panel which once folded will become a corresponding one of the interior walls; the four side portions including a first pair of opposed ones of the side portions, and a second pair of opposed ones of the side portions, each side portion of the first pair having two opposite lateral sections which interlockingly engage with the other two opposite lateral sections once folded, and a flap which comes into abutment with a corresponding one of the exterior walls once folded; and each side portion of the second pair has a flap which

precisely fits between the four interior walls when folded against the bottom of said paper dispenser.

15. to 18. (canceled)

19. (New) A paper dispenser as defined in claim 14, wherein said cross-shaped center portion further comprises four pairs of flaps, with one pair of flaps being disposed at each inner corner of said cross-shaped center portion and each flap of any given one of the four pairs of flaps being folded inwardly against the other flap of the given pair to form a corresponding edge between two adjacent exterior walls.

20. (New) The paper dispenser as defined in claim 14 further comprising a stack of rectangular shaped paper sheets snugly received in the paper-receiving compartment.
